Own Your Neighborhood

Turning India's Invisible Neighborhoods into Thriving Communities

Date: August 2026

Status: Pre-Seed Fundraising

TABLE OF CONTENTS

PART 1: THE PROBLEM Pages 3-6

PART 2: THE SOLUTION Pages 7-18

PART 3: THE BUSINESS MODEL Pages 19-28

PART 4: WHY NOW? Pages 29-34

PART 5: MARKET OPPORTUNITY Pages 35-42

PART 6: WHY LOKUL WINS Pages 43-52

PART 7: THE ASK & ROADMAP Pages 53-56

PART 8: THE TEAM & VISION Pages 57-60

PART 1: THE PROBLEM

Pages 3-6 | Theme: Chaos, Missed Opportunity, Broken Trust

The Neighborhood Paradox

600 million Indians live in dense, connected communities—apartment societies, mohallas, market lanes, colony gates. Yet there is no trusted digital layer for these communities.

What exists today is chaos:

- **WhatsApp groups** — unmoderated, unverified, information buried in noise
- **Facebook groups** — algorithmically diluted, aging demographic, no local commerce rails
- **Sulekha / NoBroker / JustDial** — transactional directories, not communities

The gap: A resident in Koramangala doesn't know about the tuition class two buildings away. A vegetable vendor in Bhopal has no way to reach 500 households within 500 meters. A building secretary in Pune has no tool to run polls, share notices, or vet a plumber.

The core insight: The local graph exists. It just has no operating system.

PART 2: THE SOLUTION — LOKUL

Pages 7-18 | Theme: Turning Neighbors Into Neighbors

What is Lokul?

Lokul.club is India's hyperlocal community platform — a verified, structured operating system for neighborhoods across Tier 1, 2, and 3 cities.

Every locality gets its own **lokul** — a gated, geo-verified community where residents, local businesses, and service providers interact through:

Community Layer: Notice boards, local news, structured discussions replacing WhatsApp chaos

Commerce Layer: Verified classifieds, local service discovery, trust signals

Transaction Layer: Payment rails, escrow, dispute resolution

Trust Layer: Geo-verification, Aadhaar checks, community vouching

Market Opportunity: TAM / SAM / SOM

PART 3: THE BUSINESS MODEL

Pages 19-28 | Theme: Sustainable, Scalable, Neighbor-Centric

Revenue Model: 4 Streams

Revenue Stream	Rate / Price	Addressable Market
Service Transaction Fees	10-15% commission	Home cooking, tutoring, handyman, caretaking
Merchant Visibility/Ads	■2,000-10,000/month	Kirana stores, vendors wanting premium placement
RWA/Society Subscriptions	■2,000-5,000/month	500 active households = 1 RWA
Micro-Insurance (Future)	Varies by coverage	Service bookings >■500

Unit Economics: Each Lokul is Its Own Business

Break-even point: 150-200 active households

Math at 200 households:

- 40 transactions/month (1 transaction per 5 active users)
- Average transaction: ■200 GMV
- Monthly GMV: $40 \times \text{■}200 = \text{■}8,000$
- Lokul commission (10%): ■800
- Operating costs: ■(~200-300)
- Net revenue per lokul: ■500-600/month

Path to scale:

- 500 lokuls = ■25-30L/month revenue
- 5,000 lokuls = ■2.5-3Cr/month revenue
- 10,000 lokuls = ■5-6Cr/month revenue (Series A target)

18-Month Financial Projections

PART 4: WHY NOW?

Pages 29-34 | Theme: Three Tailwinds Converged

Tailwind 1: UPI Revolution

"UPI processed more transactions than Visa + Mastercard combined in 2024."

This isn't just a stat. It's proof that the payment infrastructure for local commerce is ready.

The impact:

- Payment friction is removed from local services
- Digital trails enable trust signals (transaction history)
- Escrow and dispute resolution become practical
- Merchants accept digital payments as default

Why this matters for Lokul: We don't have to convince anyone to go digital. They already have. We're just adding the community and commerce layer on top.

PART 5: MARKET OPPORTUNITY

Pages 35-42 | Theme: The Last Untapped Layer

TAM / SAM / SOM Breakdown

TAM (Total Addressable Market): \$250B+

India's informal neighborhood economy — the invisible \$250B+ that flows through kirana stores, tutors, home cooks, handymen, and peer services.

SAM (Serviceable Addressable Market): \$50B+

Tier 1-3 cities with organized (or semi-organized) neighborhoods where geo-verification is practical. ~90 million households, ~65 million local businesses.

SOM (Serviceable Obtainable Market): \$500M - \$1B

Realistic 3-year capture: 5-10% of SAM, assuming 5M households and 10-15% annual transaction value.

PART 6: WHY LOKUL WINS

Pages 43-52 | Theme: Built Different. Built for India.

The Defensible Moat: Community Identity

Layer 1: Geo-Verification

GPS geofencing + Aadhaar address verification + community vouching. Gaming all three simultaneously has a social cost that exceeds the benefit.

Layer 2: Switching Costs

Once a neighborhood's social graph is on Lokul—with verified identities, transaction history, and trust signals—switching to a competitor means losing all that network value. The network is geography-specific and non-transferable.

Layer 3: Network Effects

Network effects are strongest at small scale. 150 households reach critical mass faster than 150,000. This is Lokul's advantage over global competitors.

Why competitors can't copy this:

- Urban Company doesn't have community identity—they have individual professionals
- Blinkit/Zepto have logistics (expensive, hard to defend)—not community (cheap, defensible)
- MyGate has 5M households but zero commerce—they'd have to rebuild entirely
- Marketplaces (OLX, Quikr) have anonymity—we have identity

Competitive Positioning: Speed vs Trust (Moat)

PART 7: THE ASK & 18-MONTH ROADMAP

Pages 53-56

The Ask: \$750K Pre-Seed

Allocation	Amount	Purpose
Product & Engineering	\$300K (40%)	Full product build, payment integration, verification stack, Android optimi
City Growth (3 cities)	\$250K (33%)	Community managers, society onboarding, local BD, RWA relationships
Operations & Infra	\$100K (13%)	Payments platform, trust & safety, legal, insurance partnerships
Team & G&A	\$100K (13%)	Core hires: growth lead, operations lead, finance, design

18-Month Milestones

Months 1-3: Foundation

- Complete product build (Android-first)
- Launch in 3 cities: Mumbai, Bengaluru, Bhopal
- Onboard first 50 societies/RWAs
- Hire community ops lead + first engineer

Months 4-9: Growth & Validation

- Reach 500 lokuls (500 neighborhoods)
- Onboard 100,000 verified households
- Hit █50L monthly GMV
- Launch first merchant partnership programs

Months 10-18: Scale & Series A Readiness

- Expand to 5-7 cities (add Pune, Hyderabad, Chennai)
- Reach 1,000+ lokuls, 200K+ households
- Hit █1Cr+ monthly GMV
- Achieve unit economics proof (LTV:CAC > 3x)
- Series A ready: \$5-10M to expand to 20+ cities

PART 8: THE VISION

Pages 57-60

If We Win

The neighborhood becomes the default commerce and community layer.

On a Thursday morning, 80% of residents in a locality open Lokul instead of WhatsApp. RWAs run polls, collect maintenance, and manage visitors through our platform. Kiranas have digital storefronts. Service providers have predictable income streams. Residents get local discovery done in minutes, not hours.

Economic impact: ■5,000+ Crore annual commerce flowing through hyperlocal networks, with 15-20% staying local (not leaking to Amazon or Blinkit).

Societal impact:

- Kirana stores stay alive as digital-first retail
- Informal service providers get dignity and reach
- Neighborhoods become communities, not just addresses
- Trust replaces anonymity as the default online

This is what "Own Your Neighborhood" means.

Lokul.club — The Operating System for India's Neighborhoods

Email: founders@lokul.club

Website: lokul.club

"Every city in India has thousands of invisible micro-economies — street vendors, tutors, tailors, tiffin services — operating on word-of-mouth with zero digital presence. Lokul is the infrastructure that makes local visible, trusted, and transactable."
